

SERVICENOW WEEK-1

1. Who is ServiceNow?

Employees-over 17000 people

Customers-mid-large enterprise companies(ex:Deloitte,delta,mcdonald's,Microsoft,overstock,wayfair)

Bill McDermott-CEO of ServiceNow

Fred Luddy-Founder and Board Chairman

2. When is ServiceNow?

2003:FredLuddy found the company as **GlideSoft**

2006:Company Name changed to **Servicenow**

2012:Publically traded company under trickernow

2018:Named **no.1 on Forbes magazines** list of most innovative companies

2019:Bill McDernott Company CEO

3. Why ServiceNow?

To interact with IT services and solve the business problems

4. How ServiceNow?

Cloud-based Application Platform as a Service(APaaS)-that provides the **infrastructure,platform,applications** and **workflows** requires to support business IT needs

Business people can connect and utilize the platform from their PC's or mobile devices.

ServiceNow Infrastructure

Compute Resources:Datacenters,racks,servers,ports,network resources,fans etc

Security:The platform is secured via multiple technologies which have been certified by third-party security organizations

Service Level Agreements: Paired datacenters provide redundancy and failover; Redundancy is built into every layer including devices, power and network resources

Backups: 4 daily full backups per week and 6 days of daily differential backups.

Platform

The platform is underpinned by a single, enterprise-wide data model and database and set of tables that can support most of IT functions.

The platform also supports the ability to create your very own custom workflows and applications as needed. All running atop a single source of data and seamlessly integrated into the platform.

Application and Workflows

4 workflows:

1. IT Workflow(79 applications)

Service Management, Operation Management, Business Management, Asset Management, DevOps, Security Operations, Risk, Compliance, Telecommunications Network, Performance Management

2. Employee Workflow(43 applications)

HR Service Delivery, Workplace Service Delivery, Legal Service Delivery, Procurement Service Management, Safe Workplace Suite

3. Customer Workflow(93 applications)

Customer Service Management, Field Service Management, Connected Operations, Financial Service Operations, Telecommunications Service Management

4. Creator Workflow(23 applications)

App Engine, Integration Hub

5. Where ServiceNow?

Headquarters: Santa Clara, California

Office Locations & Employees: the globe including North America, Latin America, Europe, Middle-East, Africa, Asia Pacific, Japan

DataCenters: Canada, USA, Brazil, Germany, Ireland, Netherlands, UK, Australia, Hong Kong, Japan, Singapore, India

Definition:

ServiceNow is a software company based in Santa Clara, California, founded by Fred Luddy in 2003 to solve problems of large enterprises face with traditional IT delivery by providing a robust, simple to use, cloud-based environment in which businesspeople can solve the business problems themselves. (to automate the flow of work throughout a business)

SERVICENOW PLATFORM OVERVIEW

Now Platform Architecture

Multi-instance architecture: you have your own instance of the platform and database.

Availability & Redundancy: All ServiceNow Datacenters are paired with another database to provide redundancy and failover. Redundancy is built into every layer including devices, power and network resources.

Backups & Security: ServiceNow provides 4 weekly full data backups and 6 days of daily differential backups. The entire platform is secured using multiple technologies which have been certified by 3rd party organizations.

Domain Separation(multi-tenancy): The ServiceNow platform provides the ability to separate data, processes, and administrative tasks on an instance into logical groupings called domains.

All users can potentially see records from the global domain but only users who belong to a domain can see domain-specific records.

Now Platform User-interfaces

3 user-interfaces for interacting with Now platform

1. Now Platform UI : It is best used on desktop and laptop computers and is accessed via a web-browser and the instance URL.

2. ServiceNow Mobile Apps: Are best used on mobile devices and can be installed from the device's app store. The **ServiceNow Agent** app targets fulfilling requests. The **Now Mobile** app is built for the needs of employees. The **ServiceNow Onboarding** app targets the needs of new-hire employees.

3.Service Portal:Is a user-friendly,self-service,widget-based portal accessed via a web browser and special URL.

Role-based Access

Access to ensure a user can get the information they need and no more.

1.User:Individual that have been given access to an instance.A user with no role assigned is called a **self-service user**.They can login and access actions like viewing the homepages,Service Catalog,Articles,Surveys.

2.Group:Set of users who share a common purpose and need access to similar data.Multiple roles can be assigned to a single group.

3.Role:Collection of permissions.A role can be assigned to an individual user,a group of users,or another role.Multiple roles can be assigned to a single role.

Best to assign roles to groups rather than an individual user.

Users are usually assigned to 1 or more groups and can be granted multiple roles.

User Authentication

To login to an instance,ServiceNow validates their identity and enables access to functions and data based upon their related groups and roles.

Several methods:

- | | |
|---------------------------------|-------------------------------|
| 1.Local database authentication | 4.OAuth 2.0 |
| 2.External Single Sign On(SSO) | 5. Digest Token |
| 3.LDAP | 6. Multifactor Authentication |

SERVICENOW USER INTERFACE OVERVIEW

3 Main Screen Elements

1.Banner Frame-Logo;UserMenu(profile,Impersonate User(Access to admin or impersonate user),Elevate Roles,Logout);Tools(Globalssearch-record matching keyword,connectchat-realtime messaging,help-contextual help,access to user guide and documentation search);System Settings(Customize the UI to their preferences)General,Theme,Accessibility,List,Forms,Notifications,Developer settings.

2.Application Navigator-Navigation Filter,All Applications,History(30 items),Favorites.

3.Content Frame

SERVICENOW BRANDING OVERVIEW

What is Branding in ServiceNow?

Applying your distinct corporate identity across the Now Platform UI to create a shared identity, build trust and speed adoption

Guided Setup

A System Administrator step-by-step instructions to configure various Applications and Modules within your instance to suit the needs of the users.

1.Application Navigtaor>Guided Setup>ITSM Guided Setup

Company-System Configuration, Welcome page , Connectivity, Foundation Data, CMDB, Incident Management, Major Incident Management, Problem Management, Change Management, Service Catalog, Knowledge Management, Continual Improvement Management, Project Communication, Go Live.

2.Application Navigtaor>Guided Setup>ITOM Guided Setup

MID Server, Discovery, Event Management, Operational Intelligence, Cloud Provisioning and Governance

Service Portal And UI Builder-tools used to brand interface

Service Portal-Widget based tool

UI Builder-Build Functional page (buttons and DV) and layouts

LISTS AND FILTERS

Lists

Is a user interface page displayed in the content frame that's designed specially to present lists of records from database tables it includes tools that make it easy to sort search filter and analyze list data quickly and simply it also provides the ability to select a single item from the list to display in more detail via form view there are many to access lists in servicenow -the application navigator

Incident>All—opens the list interface for the incident table

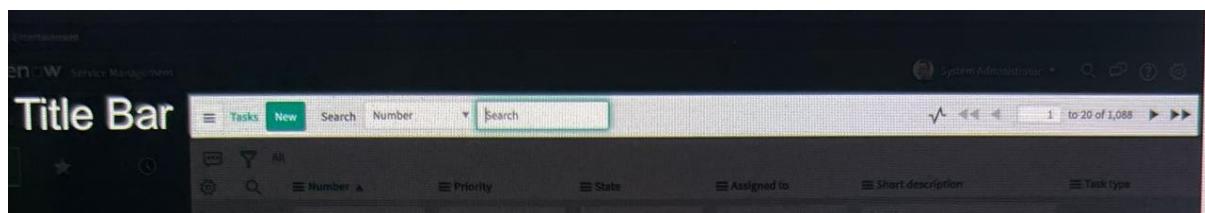

Tablename.list—open the list interface for that table

Task.list,incident.list,sys_user.list

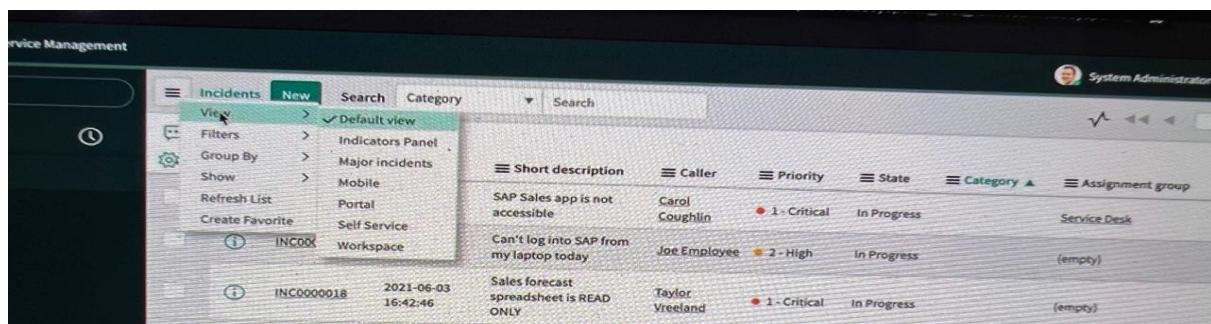

To use dot list command user must know the name of the table if not known the names of table sys_db_object.list—will open the tables table,sys_db_object is the name of a table in the servicenow database that stores a record for each table in the servicenow database.

List View

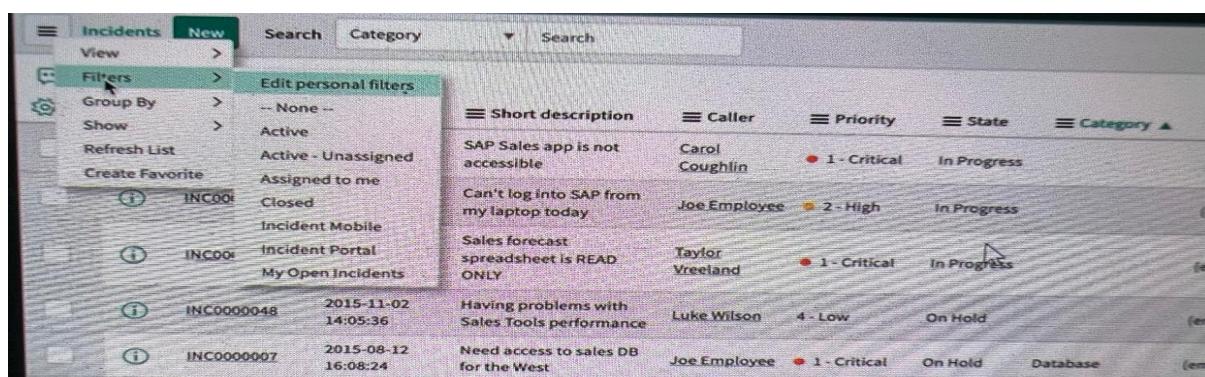

1.Topmost section of the list view page

i.Hamburger icon-List control menu

View-allows you to select from a set of saved views for the list with appropriate permissions you can set up the list as you like with certain filters sorting and fields displayed.

Filters-to only display records marked with an active status, the filter menu item allows you to choose which save filter you would like to apply for the list.

NOTE-when creating saved views and filters saved items will be available to all users of the instance for the given table or list these are not specific to own individual settings for that reason certain privileges are required.

Short description	Caller	Priority	State	Category	Assignment group
Sales app is not accessible	Carol Coughlin	1 - Critical	In Progress	Service Desk	
Can't log into SAP from my laptop today	Joe Employee	2 - High	In Progress	(empty)	
Sales forecast spreadsheet is READ ONLY	Taylor Vreeland	1 - Critical	In Progress	(empty)	
Having problems with Sales Tools performance	Luke Wilson	4 - Low	On Hold	(empty)	
Need access to sales DB in the West	Joe Employee	1 - Critical	On Hold	Database	(empty)
Need Oracle 10GR2 installed	Fred Luddy	4 - Low	Closed	Database	Database
Memory is leaking on main LS Server	Bow Ruggeri	1 - Critical	In Progress	Hardware	Hardware
Need to add more memory to laptop	Don Goodliffe	1 - Critical	In Progress	Hardware	(empty)
Need to have an issue with my hard drive...	Rick Berzle	5 - Planning	Closed	Hardware	Hardware
Lost connection to the wireless network	Rick Berzle	5 - Planning	Closed	Hardware	Network

Group By-Group the data by a single column from the table you could group the data by the category column. This will provide how many records exist for each category and expand into those categories as needed. You can group the list by any column on the table not just the columns currently displayed in the list view. To remove grouping simply select None option from the submenu.

Short description	Caller	Priority	State	Category	Assignment group
Sales app is not accessible	Carol Coughlin	1 - Critical	In Progress	Service Desk	Beth Angel
Can't log into SAP from my laptop today	Joe Employee	2 - High	In Progress	(empty)	Fred Luddy
Sales forecast spreadsheet is READ ONLY	Taylor Vreeland	1 - Critical	In Progress	(empty)	ITIL User
Having problems with					

Show-You can set the number of records you want displayed per page related to the paging tools to assist with performance. Next and previous pages to traverse the list. If you want the list records displayed in larger batches choose a larger number but know load time of the page increases as the number of records increases

Refresh List-simply refreshes or reloads the list.

Create Favorite-Adds a quick link to your application navigator's favorites tab for the list, adding favorite does not impact any other user of the instance.

ii. Names of table

Number	Opened	Short description	Caller	Priority
INC0000055	2021-08-26 21:47:23	SAP Sales app is not accessible	Carol Coughlin	1 - Critical
INC0000044	2021-06-18 17:47:08	Can't log into SAP from my laptop today	Joe Employee	2 - High
INC0000018	2021-06-03 16:42:46	Sales forecast spreadsheet is READ ONLY	Taylor Vreeland	1 - Critical
INC0000048	2015-11-02 14:05:36	Having problems with Sales Tools performance	Luke Wilson	4 - Low
INC0000007	2015-08-12 16:08:24	Need access to sales DB for the West	Joe Employee	1 - Critical
INC0000010	2021-06-17 15:53:02	Need Oracle 10GR2 installed	Fred Luddy	4 - Low

Right of the list control menu you can see which table's data is being displayed. If a saved view of the list has been selected the name of that view will also be displayed.

Opened	Short description	Caller	Priority	State
2021-08-26 21:47:23	SAP Sales app is not accessible	Carol Coughlin	1 - Critical	In Progress
2021-06-18	Can't log into SAP from			

Clicking this label also opens the list control menu.

iii. New

Number	Opened	Short description	Caller	Priority	State
INC0000055	2021-08-26 21:47:23	SAP Sales app is not accessible	Carol Coughlin	1 - Critical	In Prog
INC0000044	2021-06-18 17:47:08	Can't log into SAP from my laptop today	Joe Employee	2 - High	In Prog
INC0000018	2021-06-03 16:42:46	Sales forecast spreadsheet is READ ONLY	Taylor Vreeland	1 - Critical	In Prog
INC0000048	2015-11-02 14:05:36	Having problems with Sales Tools performance	Luke Wilson	4 - Low	On Hold
INC0000007	2015-08-12 16:08:24	Need access to sales DB for the West	Joe Employee	1 - Critical	On Hold
	2021-06-17	Need Oracle 10GR2 installed			Finalized

If the logged in user have has privileges to create new records the new button will be available, clicking it will open the form for the table emulate to create new record

iv .Search

Number	Opened	Short description	Caller	Priority	State	Category
Search	Search	Search	Search	Search	Search	Search
INC0000006	2021-08-16 16:08:05	Hang when trying to print VISO document	Joe Employee	1 - Critical	Closed	Software
INC0000008	2018-09-01 06:13:30	Defect tracking tool is down.	David Miller	3 - Moderate	Closed	Software
INC0000034	2015-11-02 12:49:08	SAP Materials Management is slow or there is an outage	Christen Mitchell	1 - Critical	On Hold	Software

Ability to search the table for some value in the specific field simply select which column or field you want to search enter your search term and hit the enter key only columns that are currently included in the list view can be selected.

NOTE-The search is executed against the entirety of the table's data not just the data currently displayed in the list a set of wildcards can be used to specify the type of search being executed

%-character specifies an end of the search

*-indicates a search for the term anywhere

=-specifies an exact match search.

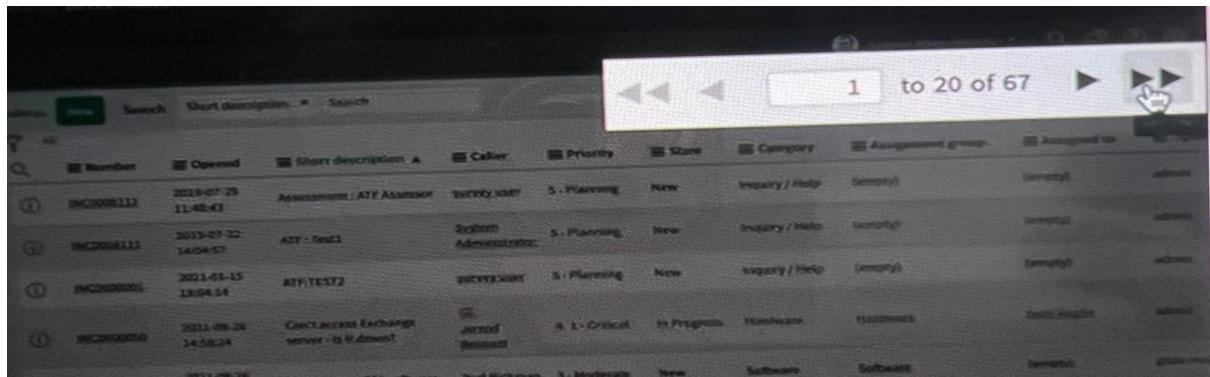

V .Activity Stream-looks like Heart beat

Number	Opened	Short description	Caller	Priority	State	Activity Stream
00112	2019-07-29 11:48:43	Assessment : ATF Assessor	Survey user	5 - Planning	New	Issue
00111	2019-07-22 14:04:57	ATF : Test1	System Administrator	5 - Planning	New	Issue
00002	2021-01-15 13:04:24	ATF:TEST2	Survey user	5 - Planning	New	Issue
00020	2021-09-26 14:59:24	Can't access Exchange server - Is it down?	Jared Bennett	1 - Critical	In Progress	Hard
00046	2021-09-26 15:04:15	Can't access SFA software	Bud Hochman	3 - Moderate	New	Software
00019	2021-06-05 16:44:33	Can't launch 64-bit Windows 7 virtual machine	Fred Luddy	2 - High	In Progress	Software
00044	2021-06-18 17:47:08	Can't log into SAP from my laptop today	Joe Employee	2 - High	In Progress	Software

This icon will appear only if the table being viewed tracks activity, opens a sidebar displaying a sequential account of all activity related to the list.

Clicking an entry in the activity stream list will open the complete list of activity for the specific record.

vi.List Paging Control's

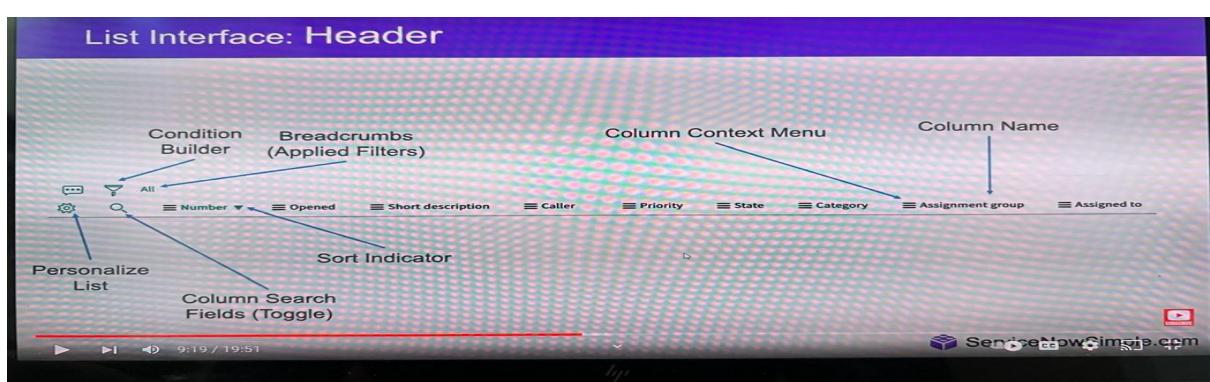

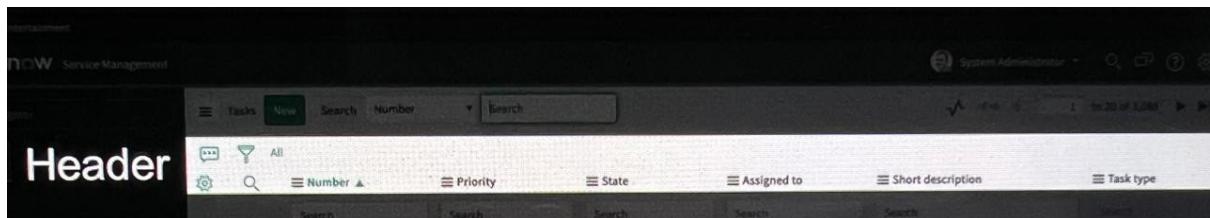

A screenshot of a list view interface. At the top right, there is a navigation bar with a double-left arrow, a double-right arrow, and a center box containing the number '1' and the text 'to 20 of 67'. Below this, there is a horizontal scroll bar.

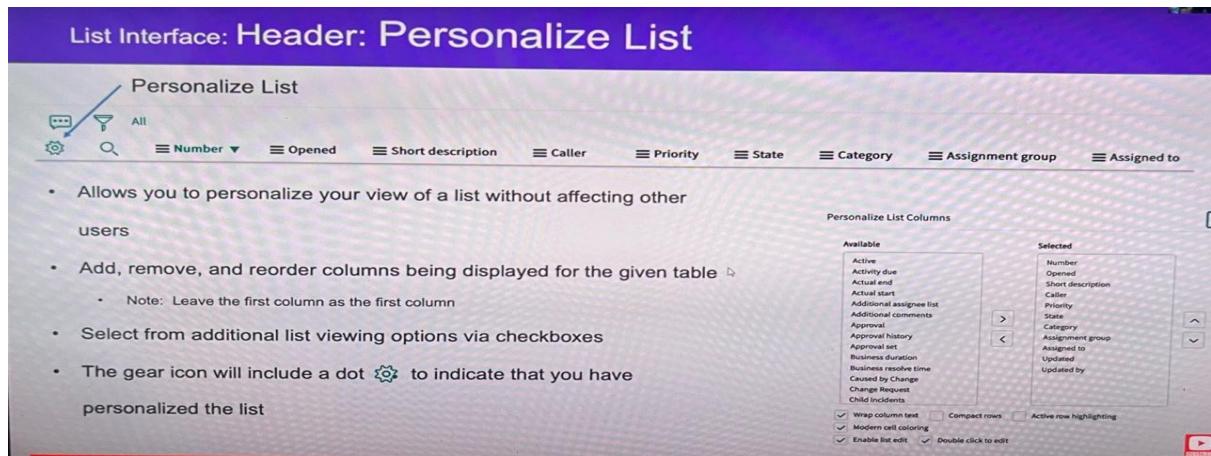

Number	Opened	Short description	Caller	Priority	State	Comments	Assignment group	Assigned to
INC0000123	2023-07-20 11:48:43	Assessment - ATF Assessor	ServiceNow	5 - Planning	New	Inquiry / Help (empty)	(empty)	admin
INC0000123	2023-07-30 14:04:57	ATF - Test1	System Administrator	5 - Planning	New	Inquiry / Help (empty)	(empty)	admin
INC0000123	2023-08-15 13:04:54	ATF-TEST2	System Administrator	5 - Planning	New	Inquiry / Help (empty)	(empty)	admin
INC0000124	2023-08-28 14:58:24	Contractor Exchange server - 12 November	System Administrator	4 - Critical	In Progress	Hardware	Hardware	David.Anglin

Use the double arrow icons to jump to the beginning or end of the list .

The single arrow icons allow you to traverse the list one page or batch at a time and label displays the batch size and current within the list

2.Header

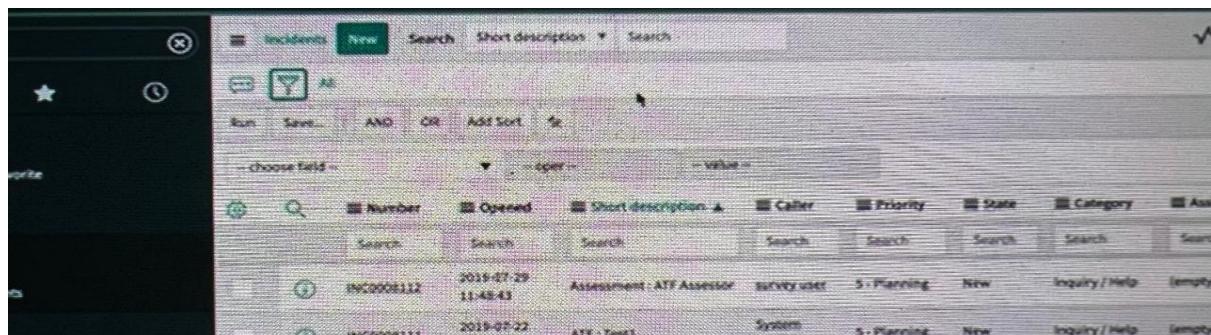

NOTE-It is best not to change the inclusion or ordering of the first column in the selected box that first column value is normally used as the link into the form view to view the details of that specific record.

Indication of the customization on the list is reflected via a small dot on the gear icon.

You can return to the list view default setting by entering the personalised list tool and clicking the reset to column defaults button.

NOTE-Any customizations you make within the personalized list tool will be saved for your own use none of these changes will have any on the other users of the instance.

ii.List Filter

ServiceNow calls condition builder this is listview's most robust tool for applying filters to the list it provides the ability to include and, or operators multiple columns and sorting as part of the filtering process.

It also provides the ability to include columns not currently being displayed as part of the filter.choose operators and values for one or more columns to build the conditions.

Click the run button to apply the filter to the list. Saved filters can also be created.

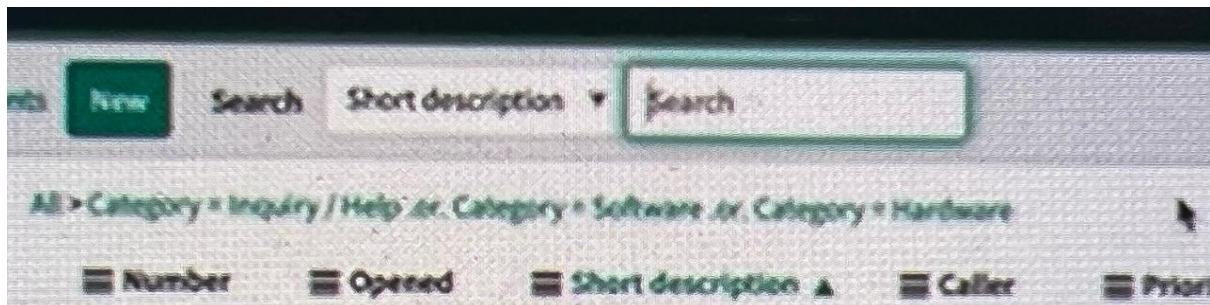

iii. Column Search Row-Magnifying Glass icon

	Number	Opened	Short description	Caller	Priority	State	Category	Assignment group	
	Search	Search	Search	Search	Search	New	Search	Search	
1	INC0008112	2018-07-29 11:48:43	Assessment : ATF Assessor	Survey user	S - Planning	New	Inquiry / Help	(empty)	(empty)
2	INC0008113	2018-07-22 14:04:57	ATF : Test1	System Administrator	S - Planning	New	Inquiry / Help	(empty)	(empty)
3	INC0008091	2021-01-15 13:04:34	ATF:TEST2	Survey user	S - Planning	New	Inquiry / Help	(empty)	(empty)

Which will toggle on or off the column search row provides the additional method of applying filters on columns being displayed in the list.

Hit enter key to apply wildcards can be used within the search fields and multi column filters can be applied by entering values from multiple columns.

iv. Bread Crumbs

All>Category=inquiry/help

Are used to indicate your location in some workflow or content map the list view uses breadcrumbs to indicate any filters that have been applied to the list.

Filter condition included in the breadcrumb will clear all other breadcrumbs to the right.

Clicking on the breadcrumb divider(>) will allow you to remove a single condition.

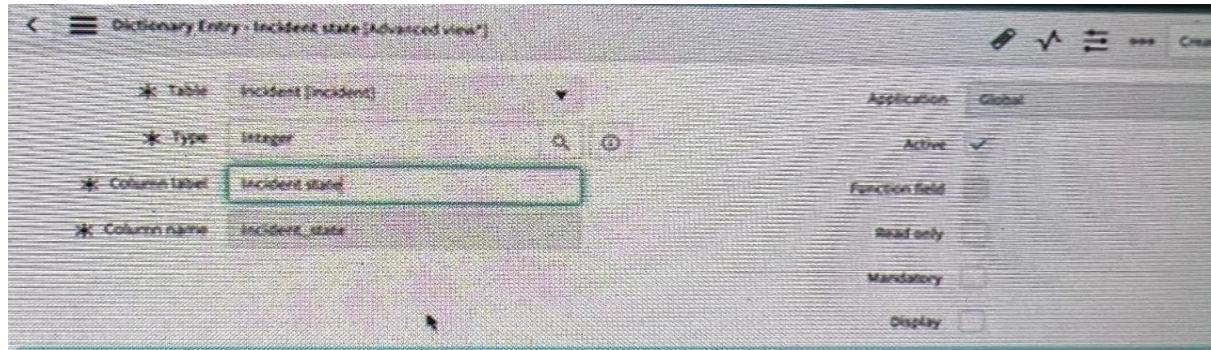

Clicking on the last breadcrumb item will refresh the list.

Clicking the all breadcrumb item will clear all filters.

3. Column name

i. List view columns

The list header is comprised of the column labels and column context menus the column labels displayed on the list view come from the database tables field labels value. As fields created for a database table both the filed name and field label are required.

Field name is the actual name of the field in the database system and it has to follow rules excluding certain characters and spaces, these are the identifiers used in coding and sql statements

Field Label- is a sort of pretty name for the field that gets used for display purposes.

ii.Column Context Menu

	Number	Opened	Short description	Caller	Priority	State	Category	Assignment group	As
	Search	Search	Search	Search	Sort (z to a)	Sort (z to a)	Search	Search	Search
	INC0000034	2021-06-29 16:52:52	Issue with a web page on wiki	Fred Luddy	5	Show Visual Task Board	Query / Help	Service Desk	(TIL, US)
	INC0000032	2021-06-01 16:07:00	Customer didn't receive eFax	Don Goodlife	5	Group By Priority	aware	Database	David L
	INC0000033	2021-06-18 17:41:01	Trouble getting to Oregon mail server	Bud Richman	5	Bar Chart	ework	Network	(empty)
	INC0000037	2016-08-10 09:14:59	Performance problems with wifi	Bertie Luddy	5	Pie Chart	Configure	> Query / Help	(empty)
	INC0000029	2021-06-16 17:00:44	I can't get my weather report	Charlie Whitherspoon	5	Import	Export	> Query / Help	Service Desk
	INC0000039	2021-06-24 17:01:12	Lost connection to the wireless network	Rick Bezzle	5	Create Application Files	Update Selected	aware	Network
	INC0000040	2021-06-26 17:01:12	Lost connection to the wireless network	Natasha	5	Update All	Create Application Files	Don Goo	David L

Clicking on column label will toggle sorting the list by that columns data ascending and descending

4.Data-rows(record)and columns(attribute or field)of the data

A screenshot of a ServiceNow table showing a context menu. The menu items are:

- Show Matching
- Filter Out
- Copy URL to Clipboard
- Copy sys_id
- Assign Tag
- Archive Record
- Assign to me
- Follow on Live Feed
- Show Live Feed
- Add to Visual Task Board

The table has the following data:

ID	Created	Last Modified	Description	Owner	Status	Type	Category
INC00000014	2023-06-29 16:52:52		Issue with a web page on WiFi	Dan G.	Open	Inquiry / Help	Service Desk
INC00000012	2023-06-01 16:07:30		Customer didn't receive eFax	Open G.	Open	Software	Database
INC00000039	2023-06-18 17:41:01		Trouble getting to Oregon mail server	Brett H.	Open	Network	Network
INC00000017	2023-06-10 09:14:59		Performance problems with wifi	Brett H.	Open	Inquiry / Help	(empty)
INC00000029	2023-06-16 17:00:44		I can't get my weather report	Charlie White	Open	Inquiry / Help	Service Desk
INC00000030	2023-06-24 17:03:12		Lost connection to the wireless network	Rick De	Open	Hardware	Network

Show matching-will filter the table to only include records that contain that value for that field.

Filter out-displays records containing anything but that value in that field

Copy url and copy sys_id-enable the ability to get a handle on the specific record via the clipboard.

With **copyurl** the clipboard is populated with a url that can be used to access the details of that specific record in a form view that url could then sent to another as a link to open the specific record.

With **copy sys_id** populates the clipboard with the database sys_id value for the specified record sys_id are lower identifiers that exist within the database,most often they're used by developers and administrators to troubleshoot issues or to leverage in some development activity

Assign Tag-allows you to associate the specified record with a tag.servicenow's tagging capability allows you to assign text-based labels to items like records to further organize and group related items.Tags can be used to provide additional sorting,filtering and notification capabilities.

Check boxes-allow multiple records to be selected for inclusion in some multi-record activity.

The screenshot shows a service management interface with a sidebar on the left containing navigation links such as 'Incidents', 'Self-Service', 'Incidents', 'Watched Incidents', 'Service Desk', 'Incidents', 'Incident', and 'Create New'. The main area displays a table of incidents with columns: Number, Opened, Short description, Caller, Priority, State, Category, and Assignment group. The table lists several incidents, including one with a detailed description: 'The USB port on my PC stopped working'.

Number	Opened	Short description	Caller	Priority	State	Category	Assignment group
INC00000024	2021-06-29 16:52:52	Issue with a web page on wifi	Fred Luddy	S - Planning	Closed	Hardware	(empty)
INC00000022	2021-06-01 16:07:00	Customer didn't receive eFax	Dan Goodlife	S - Planning	Closed	Hardware	(empty)
INC00000039	2021-06-18 17:41:51	Trouble getting to Oregon mail server	Bud Richman	S - Planning	Closed	Hardware	(empty)
INC00000057	2016-08-10 09:14:39	Performance problems with wifi	Bertie Luby	S - Planning	Closed	Hardware	(empty)
INC00000023	2021-06-16 17:00:44	I can't get my weather report	Charlie Whitherspoon	S - Planning	Closed	Hardware	(empty)
INC00000030	2021-06-24 17:01:12	Lost connection to the wireless network	Rick Bezle	S - Planning	Closed	Hardware	(empty)
	2021-06-26	Restart my macbook	Natasha	S - Planning	Closed	Hardware	(empty)

A context menu is open over the second incident row, listing options: 'Actions on selected rows...', 'Archive Record', 'Delete', 'Follow up', 'Live Feed', 'Repair SLA!', 'Add to Visual Task Board', 'Create Application File', 'Assign Tag', 'New tag', 'Android', 'Java', 'JavaScript', 'Development', 'EVAM configuration for Search', 'High Priority', 'Defect', 'Idea', 'More...', 'Remove Tag', and 'Actions on selected rows...'.

The actions on selected rows drop down at the bottom of the table provides a list of activities that can be executed on the group of selected records.

This screenshot shows the same service management interface and incident list as the previous one. The context menu is still open over the second incident row, and the 'Archive Record' option is now highlighted with a blue selection bar.

Information icon-provides the ability to display a quick preview of the record in a pop-up without leaving the list.

The screenshot shows a ServiceNow interface with a list of incidents. One specific incident is highlighted with a light blue background. The details for this incident are shown in a preview pane:

Number	INC0000024	Contact type	Phone
Caller	Fred Luddy	State	Closed
Category	Inquiry / Help	On hold reason	
Subcategory		Impact	3 - Low
Service		Urgency	3 - Low
Service offering		Priority	5 - Planning
Configuration item		Assignment group	Service Desk
Universal		Assigned to	ITIL User

The record's full detail form can be accessed from the preview by clicking the open record button.

FORMS IN SERVICENOW

A form in ServiceNow is a common set of tools and user-interface elements used to view and update a single record from the database.

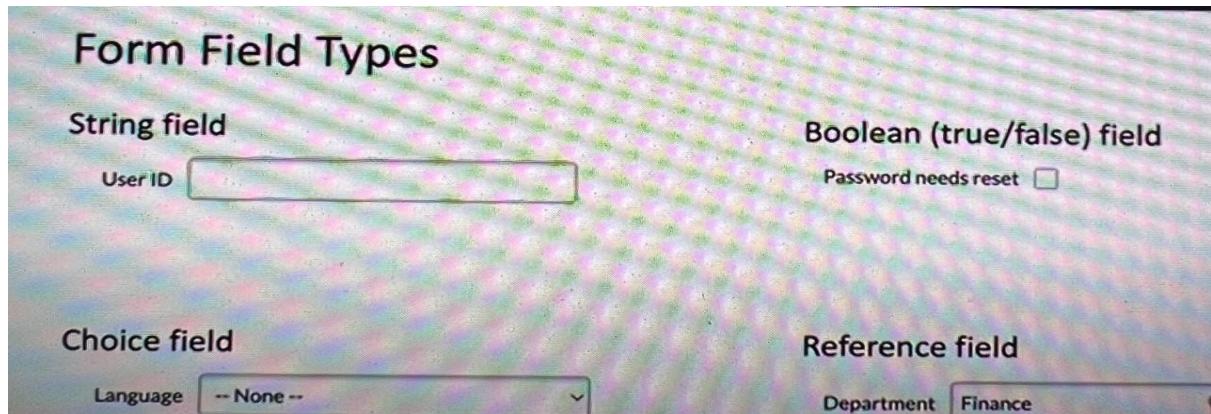

Viewing and interacting with anytime you're working with a single record in servicenow .

Opening a record from a list or entering the ID of the record if you know it in the global search that'll take you directly there anytime you're viewing a form you're either viewing a record that already exists or you're in the process of creating a new record that hasn't been saved yet and remember there's form for every type of record.

The screenshot shows a ServiceNow incident detail form for record INC00000025. The form is annotated with several labels:

- Header Bar: Points to the top navigation bar.
- Fields: Points to various input fields like Number, Caller, Category, etc.
- Required: Points to a field with a required indicator (*).
- Read-only: Points to a field with a read-only indicator (R).
- Sections: Points to the Related Records and Resolution Information sections at the bottom.
- Related Lists: Points to the Watch list and Work notes lists.

Header Bar across the top that provides a standard set of tools the main section of every form is filled with fields displaying the records attributes and their labels. All required fields are marked with an asterisk and all read-only fields are marked with a gray background and additional sections can be displayed to group common fields and display what ServiceNow calls related lists and formatters.

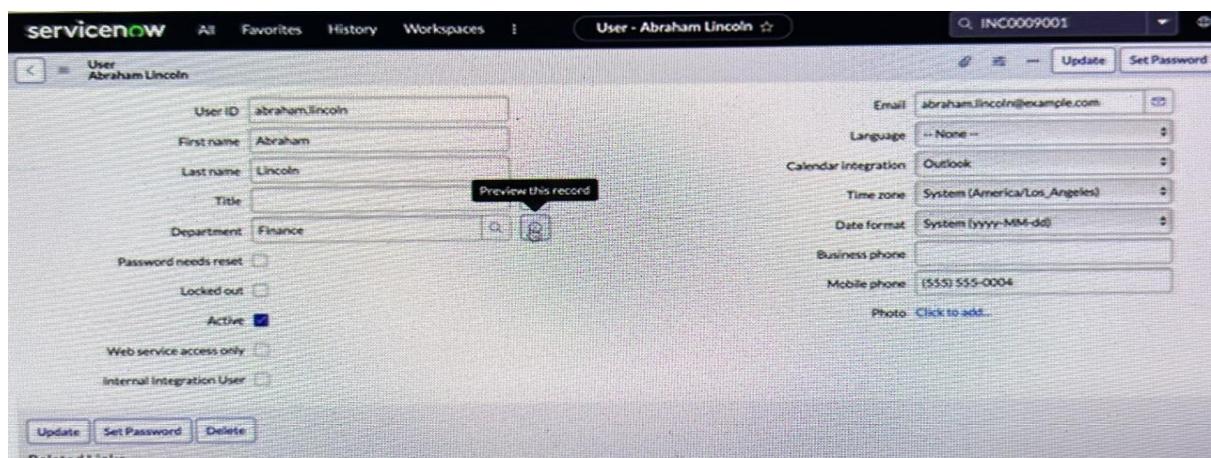

String field-display with a simple input element.

Boolean-display as check boxes

Choice field-display as drop-down lists.

Reference field-the database display a value that is pulled from some other table.

Department field of the user table is an example of a reference type field only values that exist in the department table are valid entries.

If don't know the available values from the reference field click the loop up icon to view tha available records from the department table.once the reference field populated the system provided preview icon allowing you to view a preview of the record from the refernce table and you can open the form for the refrence record with open record button.

Select target record

Enter email address

Journal field

Additional comments (Customer visible)

Work notes

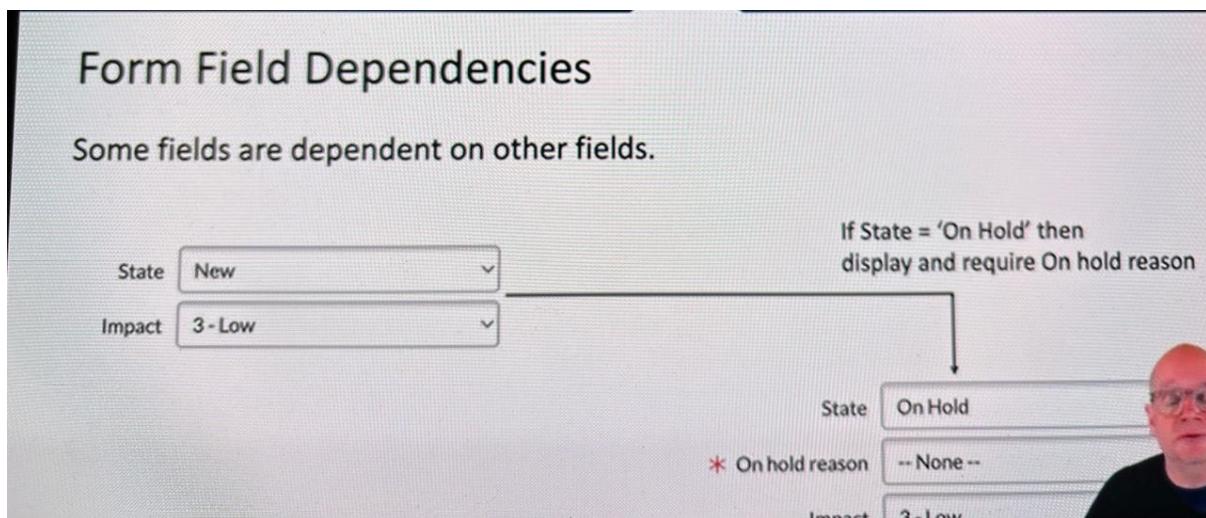

A field defined as a list field is a lot like a reference field except you can populate it with multiple values from the reference table.

The UI for these fields provides tools to create a one-to-many relationship between the record and the reference table,

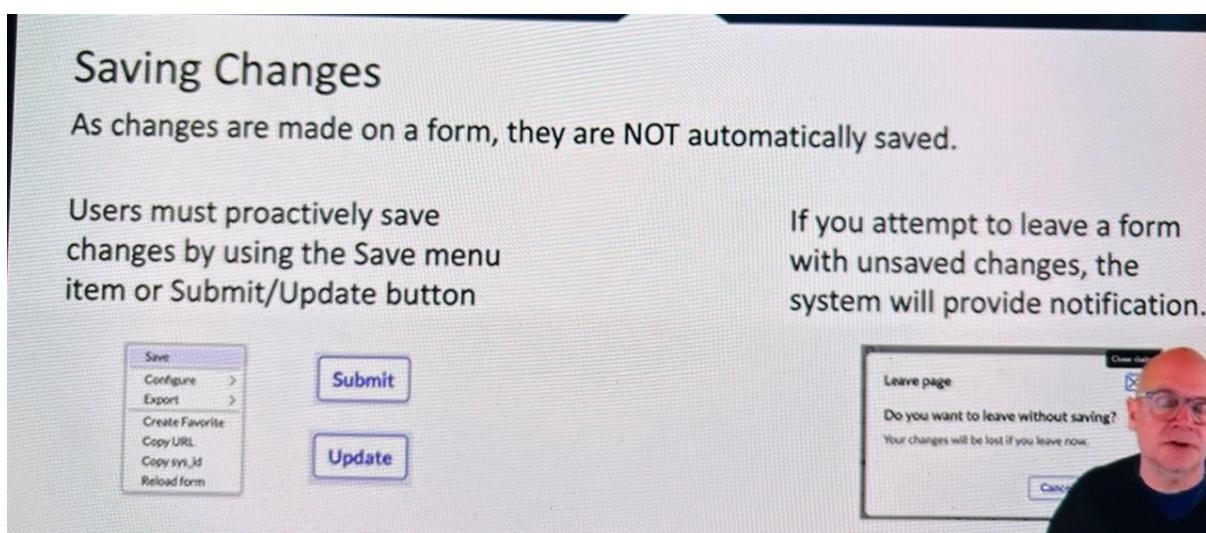

Journal fields allow you to enter notes to a record that can be viewed by certain users these fields are mostly used with tasks, incidents and change type records.

The additional comments are viewable by the customer associated to the task incident or change.

Worknotes are only visible to other back-end type users that may be working on the task incident or change.

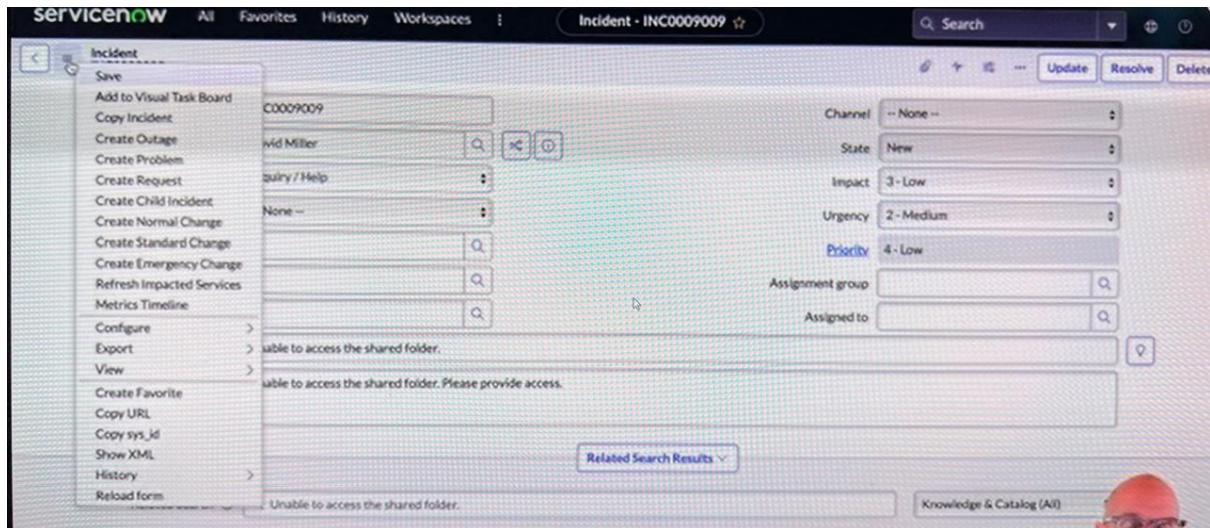

Onhold-when the state of incident is set to a different value the onhold reason field will be hidden this is achieved by UIpolicies.

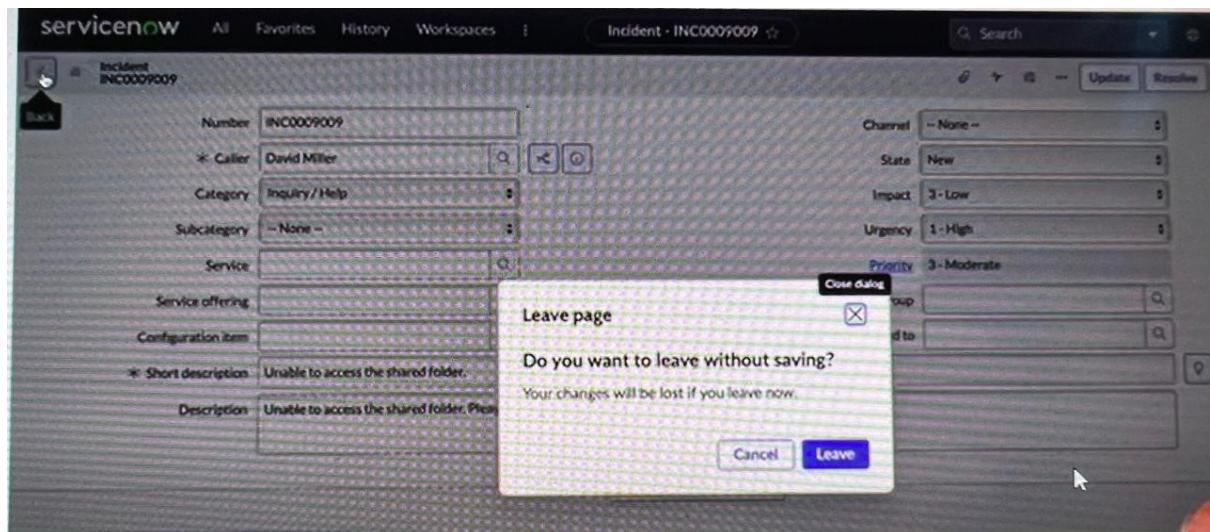

Servicenow is not automatically saving your changes to the database as you have to proactively save your changes via submitting, updating or saving the form.

Clicking the submit or update button on the form will save any changes that you've made to the database and will close the form.

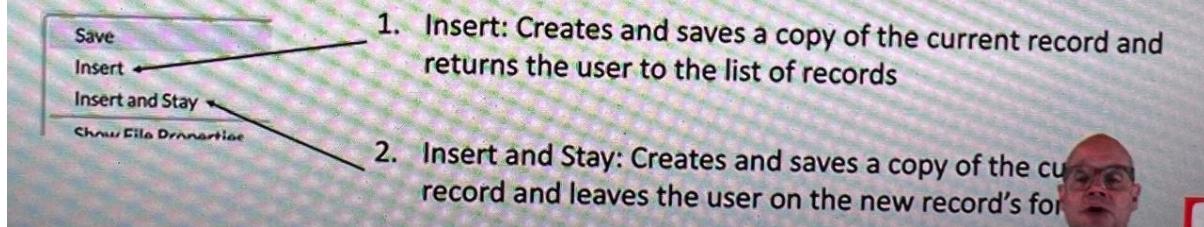

Save menu item from the forms context menu clicking save will save the changes but it will leave the form open with the current record which will allow continue viewing or making additional changes.

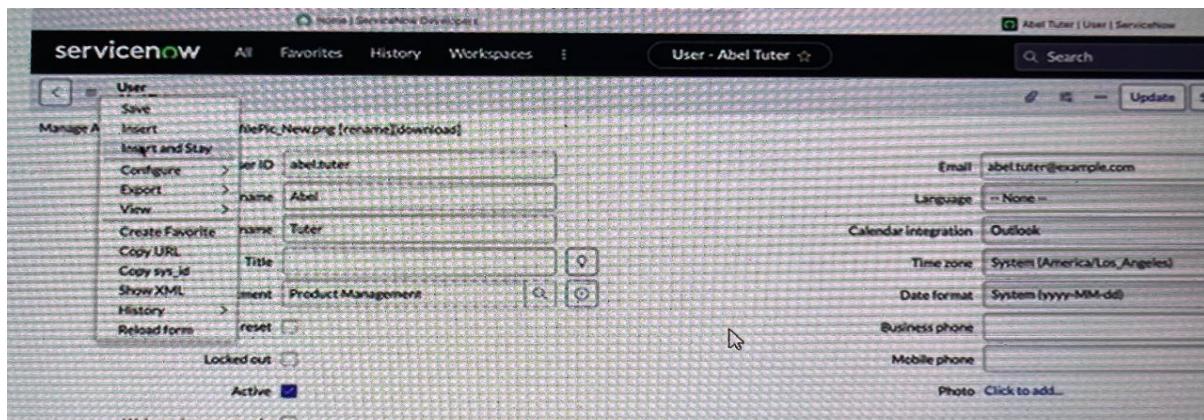

The changes on form not yet submitted or saved to the database and attempt to traverse away from the form the system will notify you that you have changes that haven't been saved and allow discard to discard or save those changes at that point.

Copying a Record

Most forms provides two methods of creating a new record as a copy of an existing one.

- 
1. **Insert:** Creates and saves a copy of the current record and returns the user to the list of records
 2. **Insert and Stay:** Creates and saves a copy of the current record and leaves the user on the new record's form

The screenshot shows a ServiceNow User edit form for 'User - Abel Tuter'. The left sidebar lists actions: Save, Insert, Insert and Stay, Configure, Export, View, Create Favorite, Copy URL, Copy sys_id, Show XML, History, and Reload form. The main area contains fields for User ID (abeltuter), Name (Abel), Title (Product Management), Email (abel.tuter@example.com), Language (None), Calendar integration (Outlook), Time zone (System (America/Los_Angeles)), Date format (System (yyyy-MM-dd)), Business phone, Mobile phone, and Photo (Click to add...). A note at the bottom says 'Photo: Click to add...'.

Form Sections

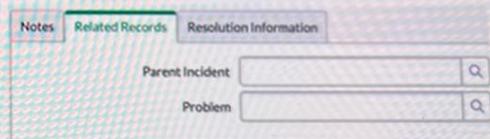

Forms are made up of Sections that organize the fields and other data.

Sections can be viewed as tabs or expandable sections, depending on the preference of the user.

Organize form sections and related lists into tabs in classic forms

Tabbed Section

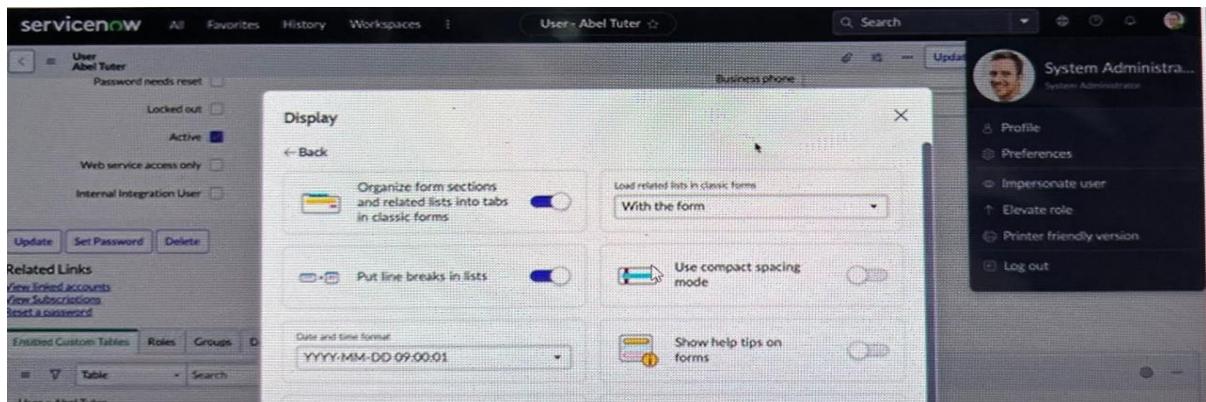

The screenshot shows a tabbed section with three tabs: Notes (selected), Related Records, and Resolution Information. Under Notes, there are fields for Parent Incident and Problem.

Expandable Section

The screenshot shows an expandable section with three items: Notes, Related Records, and Resolution Information, each preceded by a right-pointing arrow.

Forms are designed and built using sections that are used to organize the fields and other data those additional sections can be displayed via a tabbed format or through expandable and collapsible type containers the logged in user can decide which display format they prefer.

The way to set the format is to access the user menu which is at the top right of servicenow's main header bar and choose the preferences display menu item we see the organize form sections as tabs toggle it on or off making this change will only impact the logged in user and it'll also be stored as part of the user's profile for future sessions.

Form Related Lists

A related list is a special form element that displays a list of records from another table that is related to the current record (a one-to-many relationship). For example, a User form might contain a related list displaying all Roles that have been associated with the user.

Role	State	Inherited	Inheritance Count
user_criteria_admin	Active	True	
evm_admin	Active	True	
on_templated_evm_template_support_admin	Active	True	

Form Formatters

A formatter is a special form element that displays information that is not a field in the record. For example, an Activity Formatter displays the list of activities, or history, on a Task form

Work notes

Activities: 2

System Administrator
Changed the priority of the Incident

Work notes * 2018-09-11 20:57:01

Field changes * 2018-09-11 20:57:01

A formatter is a form element used to display information that is not a field in the record. Add formatters to a form by configuring the form.

Examples of formatters in the base platform

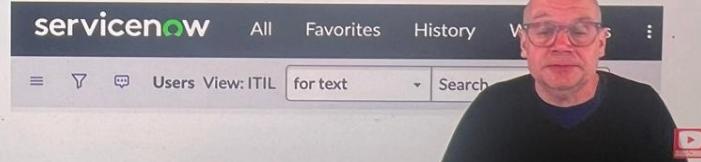

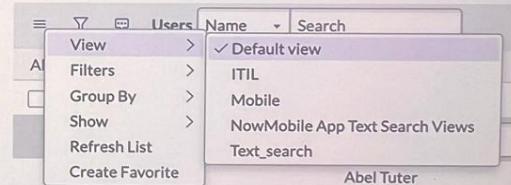

Formatter	Description
Activity formatter	Displays the list of activities, or history, on a task form.
Process flow formatter	Displays the different stages in a linear process flow across the top of a record.
Parent breadcrumbs formatter	Provides breadcrumbs to show the parent or parents of the current task.
Approval summarizer formatter	Displays dynamic summary information about the request being approved.
CI relations formatter	Displays on the CI form a toolbar for viewing the relationships between the current CI and related CIs.

Note: Formatter elements cannot be exported to PDF. When exporting PDF data from a form, any formatter elements added to the form are not displayed in the PDF output.

Form Views

Not every user wants to see a record's data in the same way.

Form views provide the ability to display and organize fields, related lists, and formatters in different ways to meet the needs of specific users.

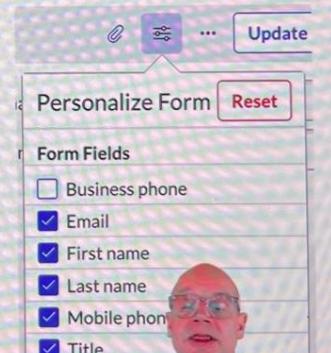

Form Personalization

Form personalization allows the user to select which fields are displayed on a particular form view.

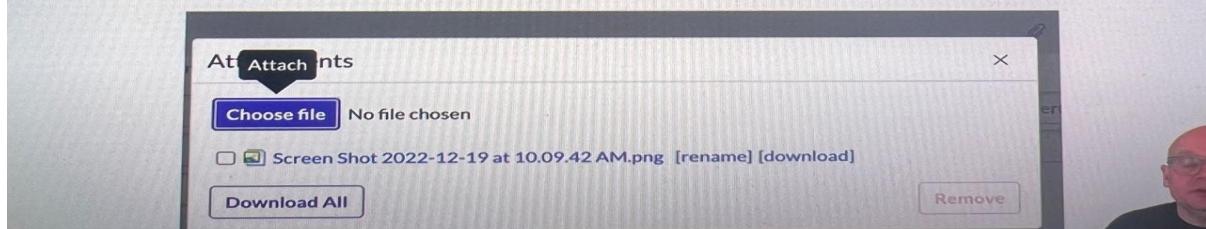

These changes do not impact any other users.

Clicking Reset will return the form view to its original settings

Form Attachments

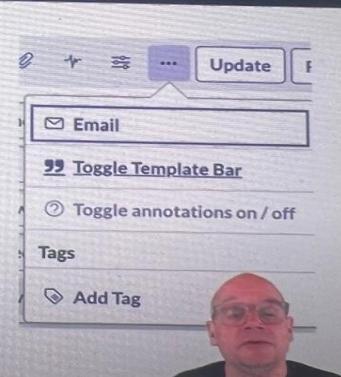

The Manage Attachments button provides the ability to attach files to a record.

Form Templates

Templates are used to simplify the process of creating new records by populating some form fields automatically. The More Options icon provides the ability to toggle on/off the template bar at the bottom of the form.

Any user can toggle on/off the template bar and create templates. The templates a user can access are dependent on the access controls set within each template.

Form Templates

- Templates can set the value of fields regardless of their visibility in the form view
- The checkmark icon identifies fields modified by an applied template
- Field values can include variables (Ex. The logged in user)

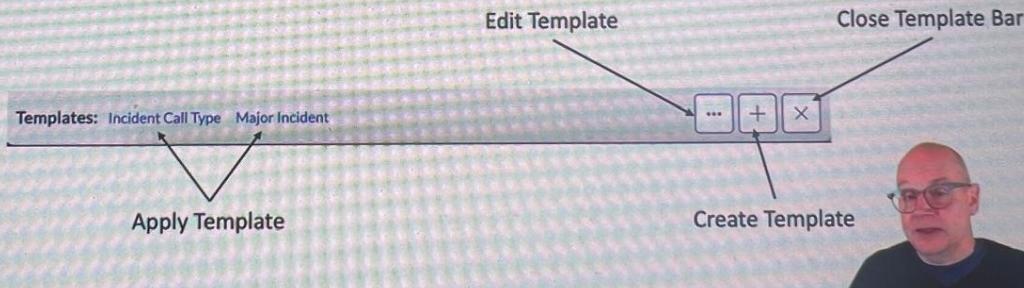

Caller javascript:gs.getUserID();

- Saving a template with the same name as the table it applies to will make it the default template to be applied on every new user-created record

Form Templates

The template bar provides shortcuts to apply, edit, and create templates for the current form.

Creating & Editing Form Views

Two tools exist for creating and managing form views, both available from the form context menu.

The **Form Design** tool provides a drag-and-drop GUI method of creating views and laying out sections and fields.

The **Form Layout** tool provides a simpler method of creating views and adding, removing fields.

INTRODUCTION TO IMPORTING DATA IN SERVICENOW

In ServiceNow, the import process introduces an intermediary data entity between those two steps. We will refer to that entity simply as **Staging** (ServiceNow calls it an Import Set Table). That entity is an automatically created custom table that is used to stage the imported data prior to processing and loading into the Target. It enhances the performance of the import and provides a useful tool for designing field-level mappings and data transformations.

So, a ServiceNow import actually involves 3 data entities:

1. **Source**
 - The entity containing the data to be imported into ServiceNow
 - ServiceNow is prepared to work with many sources including files (Excel, CSV, JSON, etc.), JDBC-compatable databases, LDAP, REST, and custom scripts
2. **Staging**
 - A table that ServiceNow automatically creates as part of the import process to temporarily store data pulled from the Source prior to transforming and adding to the Target
 - Enhances the performance of the import and provides useful tools for designing field-level mappings and data transformations
3. **Target**
 - The ServiceNow table into which the data will be imported
 - This could be an out-of-box ServiceNow table or a custom table created specifically for our purposes

```
graph LR; Source[Source] --> Staging[Staging]; Staging --> Target[Target]
```

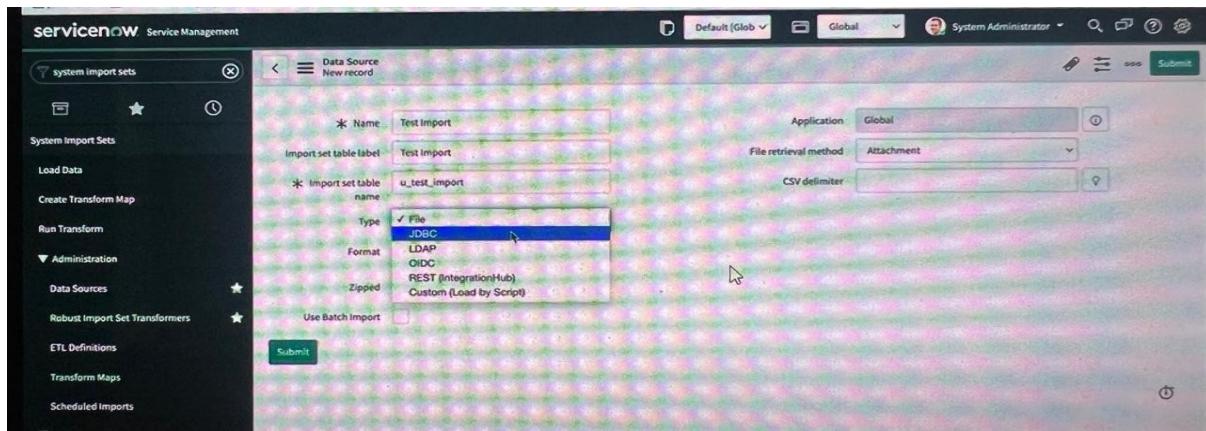

CREATING DATA SOURCE IN SERVICENOW

1. Datasource(sys_data_source)

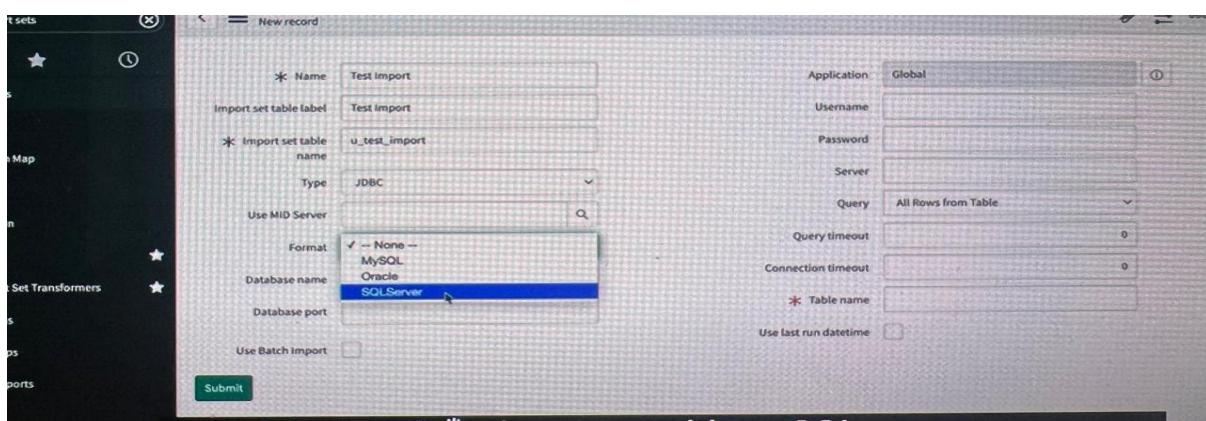

Administration>Datasources

The screenshot shows the ServiceNow Administration interface with the 'Datasources' list page. The left sidebar has a 'Data Sources' section under 'Administration'. The main area displays a table with columns: Name, Type, Format, and Updated. A search bar at the top is empty, and a message 'No records to display' is shown below the table. The top navigation bar includes 'Default (Glob)', 'Global', 'System Administrator', and other standard icons.

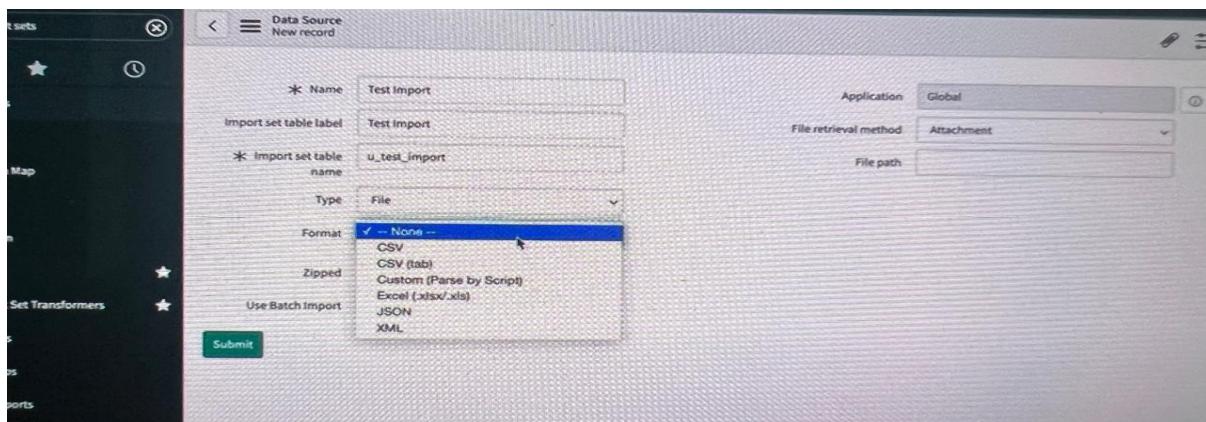

Click New

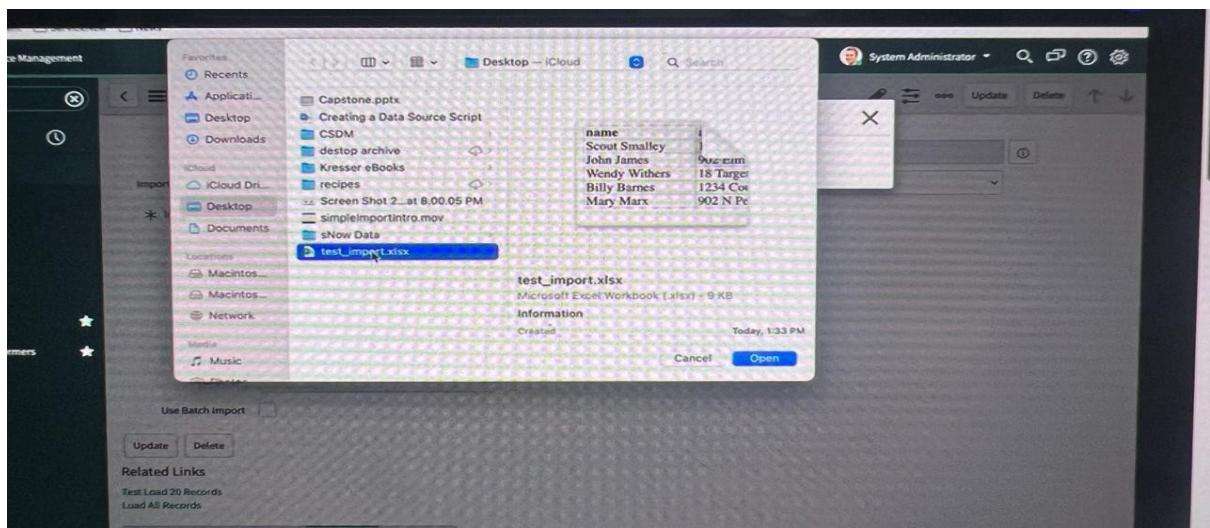

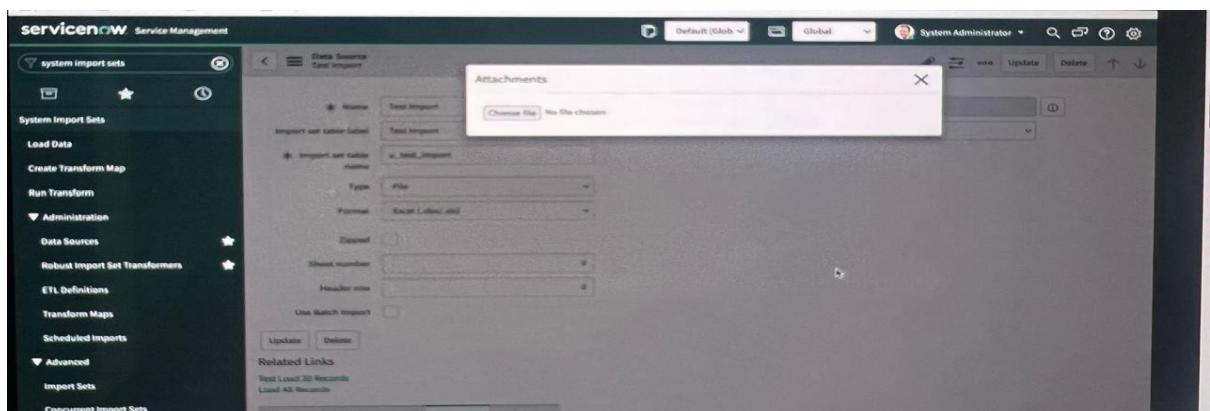

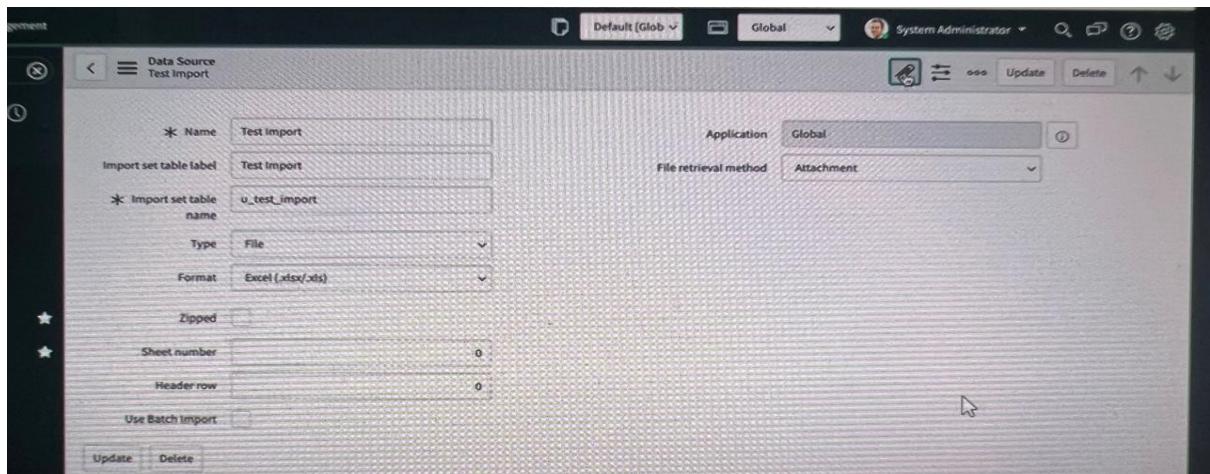

If JDBC then format options are

Type is chosen file then format options are

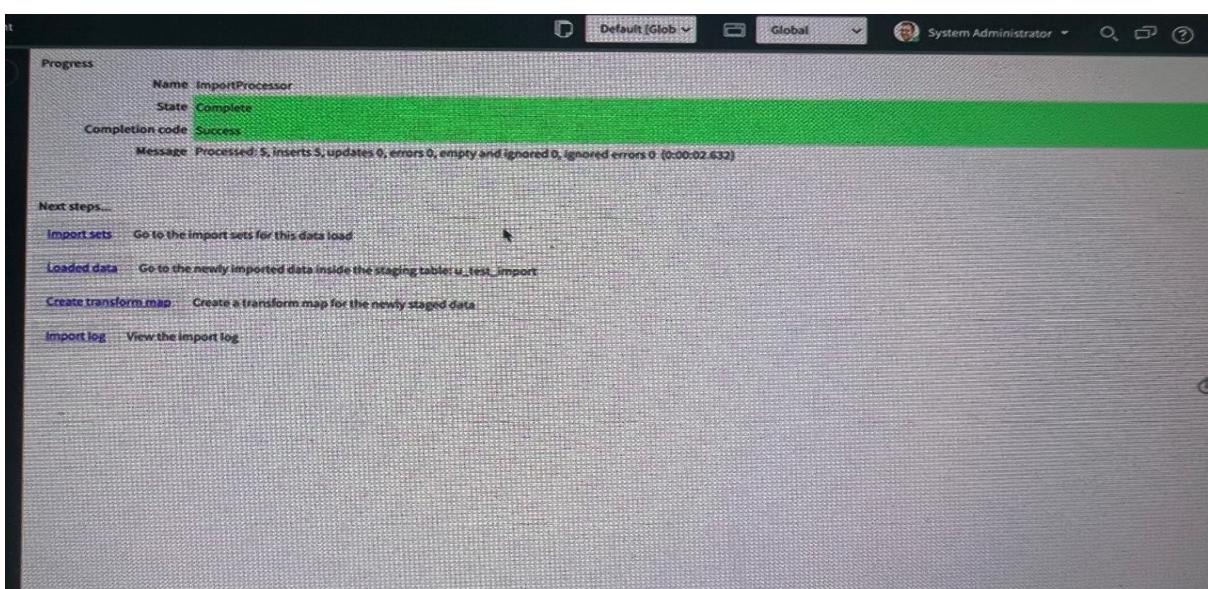

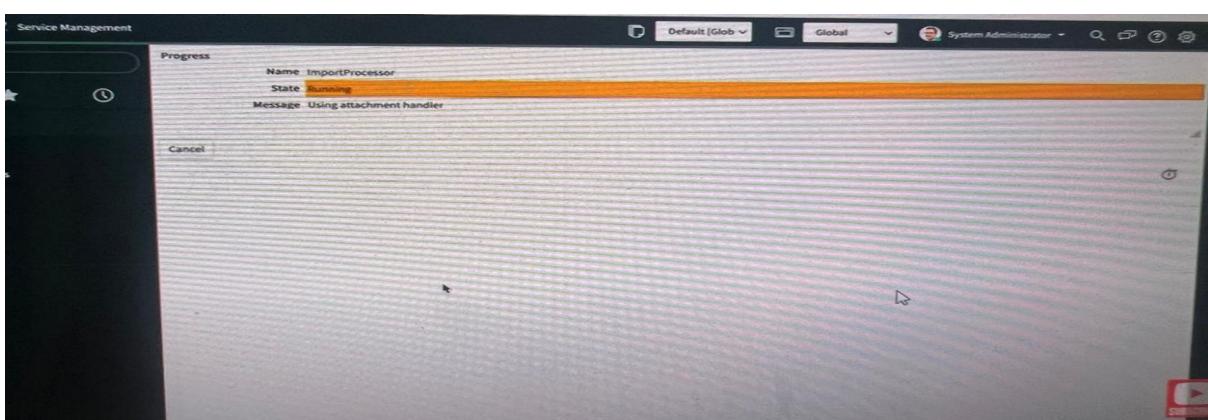

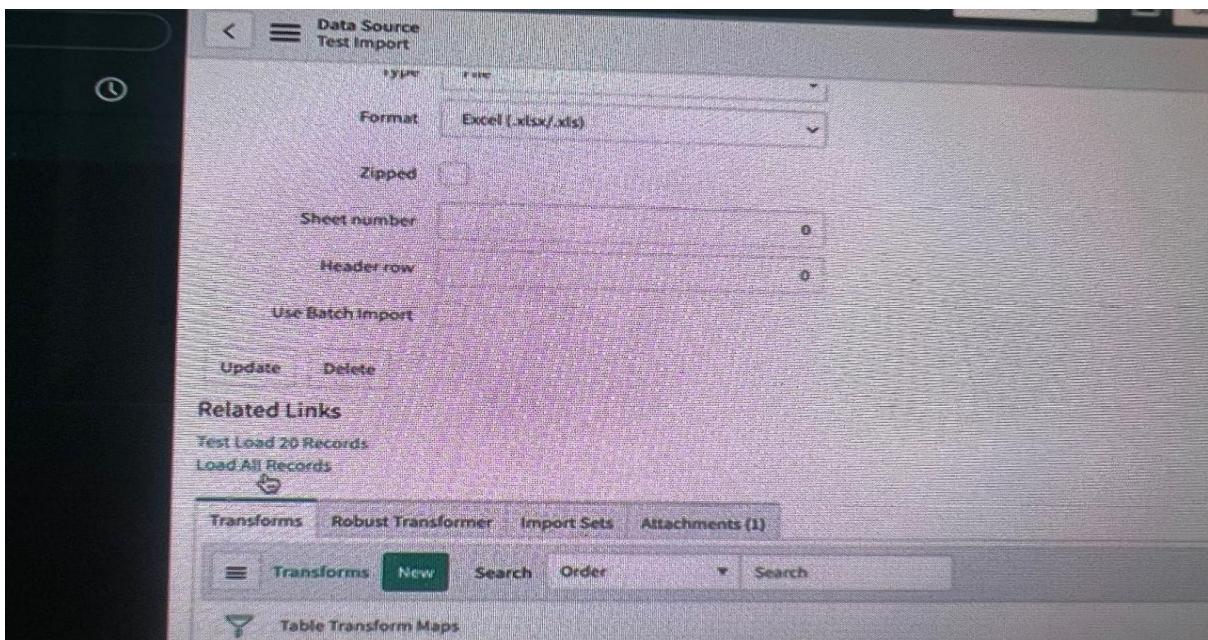

2. Load Data

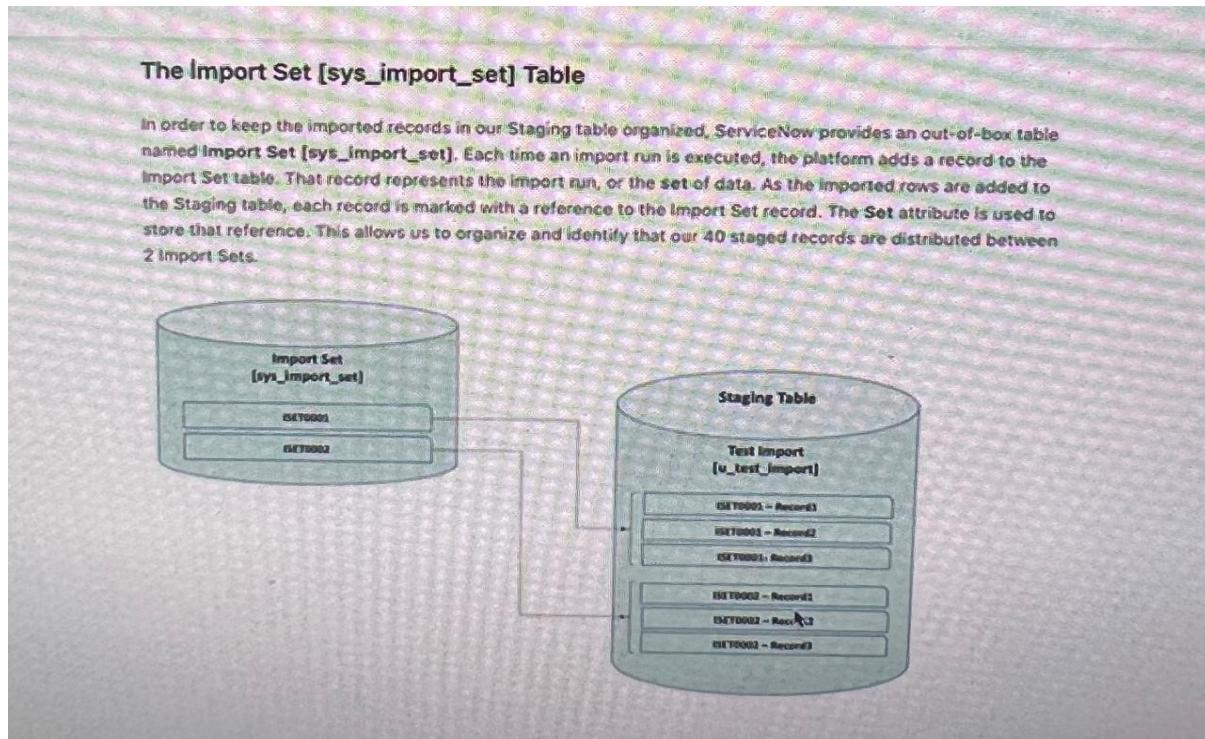

Save and update.

UNDERSTANDING IMPORT SETS IN SERVICENOW

Go to ALL>importset table name(u_test_import.list)—opens the loaded data

SERVICENOW INCIDENT MANAGEMENT TUTORIAL AND TASK ADMINISTRATION

A Task is some item of work that needs to get done. In ServiceNow, each Task is represented by a record in a database table named Task [task].

ID	Desc	State (Status)	Assigned To	Priority	Due Date
001	abc	Pending	Jeff	High	01/02/03
002	xyz	In Progress	Terri	Low	04/05/06

The Task table defines attributes common to all types of tasks.

servicenow All Favorites Hist task.list

Task Management

- Defining and managing tasks in ServiceNow allow you to take common work that needs to be done and build repeatable processes to efficiently get it done
- Assignment Rules auto assign tasks to users or groups, making sure they are handled by the most appropriate team members
- Approvals can be created for a list of approvers (manually or automatically) according to approval rules
- Service Level Agreements track the amount of time a task has been open to ensure they are completed within an allotted time
- Inactivity Monitors ensure that tasks don't fall through the cracks by notifying when tasks have been untouched for a predefined period
- Workflow are processes that can be created and applied to tasks that meet certain criteria

Task Assignment

- Tasks can be assigned to an individual User or a Group of Users (or both)

Assignment Rules

- AppNav: All > System Policy > Rules > Assignment
- Table: Assignment Rule [sysrule_assignment]

Manual or Automatic

User
Ex. Abraham Lincoln

Group
Ex. Hardware Support

Task Assignment

- Tasks can be assigned to an individual User or a Group of Users (or both)

Assignment Rules

- AppNav: All > System Policy > Rules > Assignment
- Table: Assignment Rule [sysrule_assignment]

Assignment Lookup Rules

- AppNav: All > System Policy > Rules > Assignment Lookup Rules
- Table: Assignment Data Lookup [dl_u_assignment]

Manual or Automatic

User
Ex. Abraham Lincoln

Group
Ex. Hardware Support

Task Collaboration

User Presence allows multiple stakeholders to view and update a record simultaneously

The Active Viewers Icon will display on the header bar when another user is viewing the record at the same time.

The Real-time Editing (Pulse) Icon will display beside a field that has been changed by another user.

Subcategory Disk

Visual task boards

Provides a more graphical drag and drop paradigm for viewing tasks.

These are great for identifying bottlenecks or organizing your work visually

Visual Task Boards

Title

Quick Panel

Lanes

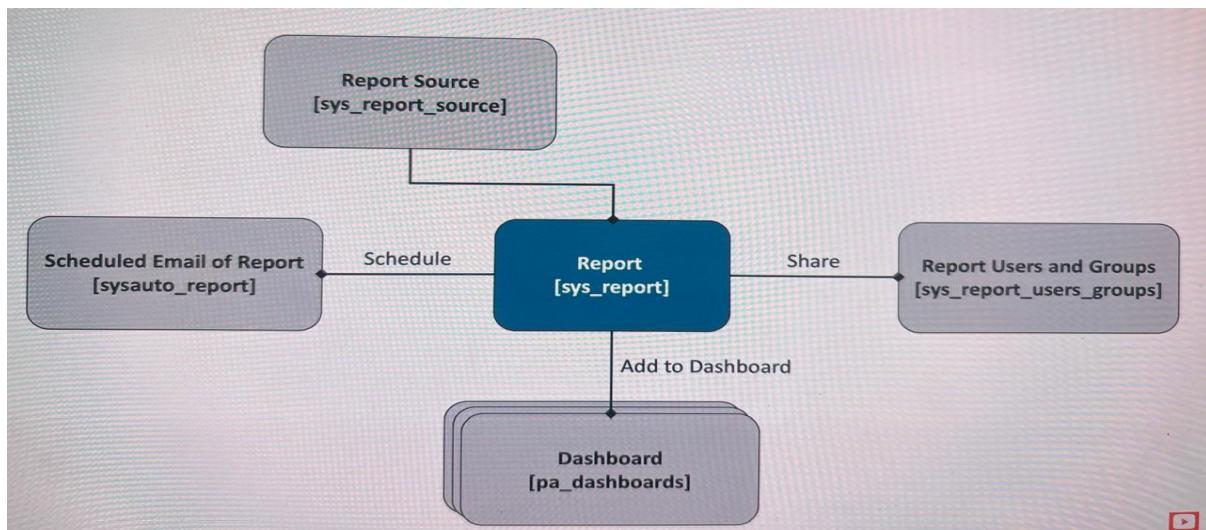

Tools

Cards

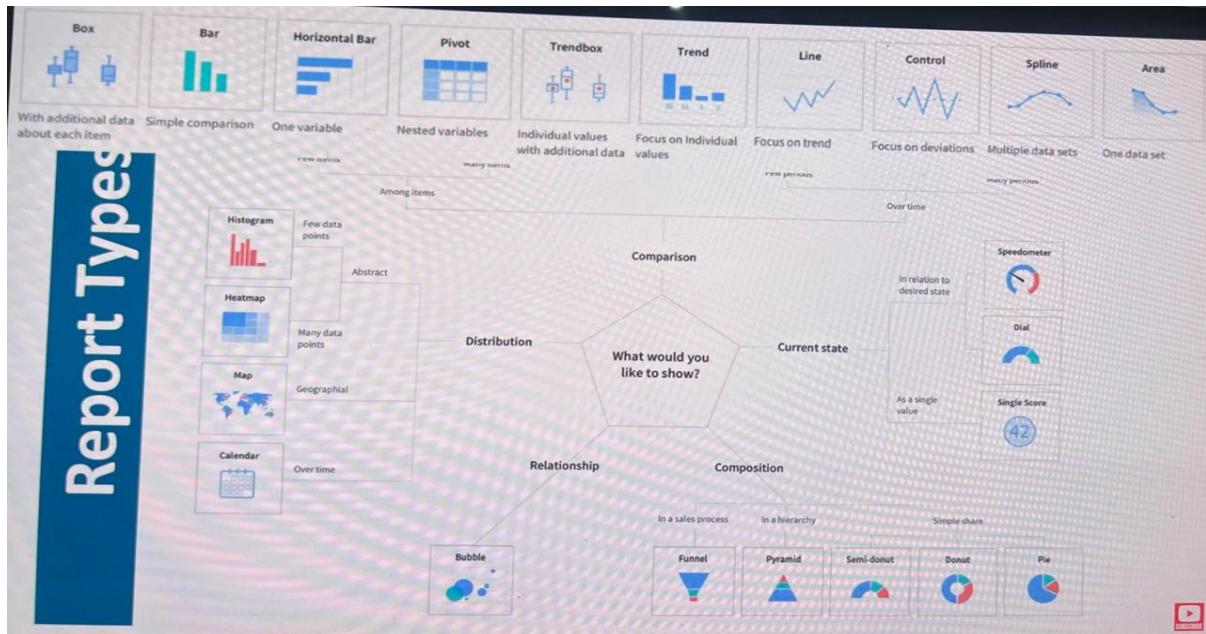

Visual Task Board Types

- Guided
 - Normally created from a list using an attribute that has a pre-defined set of values as lanes
 - Task values are changed when cards are moved between lanes
- Flexible
 - Normally created from a list using an attribute that does not have a pre-defined set of values as lanes
 - Tasks values are not changed when cards are moved between lanes
- Freeform
 - Not created from a list
 - Used for personalized work management via Private tasks

WHAT IS LOW CODE NO CODE DEVELOPMENT?

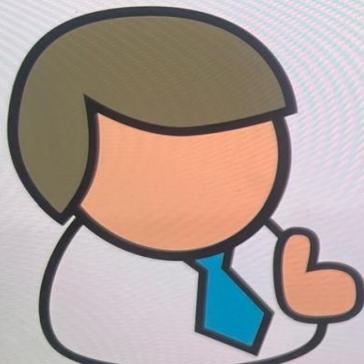

Low Code / No Code servicenow

- **App Engine Studio (AES):** Guided experience for creating everything you need for your low code / no code applications; build tables, import spreadsheets, create workflows, UI's, manage security
- **Studio:** Dig deeper into your applications components and capabilities; IDE
- **Now Experience UI Builder:** Create workspaces and portals via drag-and-drop;
- **Flow Designer:** Use natural language to automate workflows, approvals, tasks, notifications and record operations without writing any code
- **CMDB:** Understand the entirety of your IT infrastructure; the underlying platform upon which your low code / no code apps are built.

Low Code / No Code

Low Code / No Code Pros & Cons

Pros

- Empowers the people that know the business to solve business problems themselves
- Improves agility via tools for creating IT-services quickly
- Lower costs via more apps in less time with less dependence on IT
- Increased automation opportunities

Cons

- Requires generalization which limits flexibility
- Limits technical improvements (I can code this better)

Low Code / No Code Career Opportunities

- Think 'outside the box' about how you get work done; is there a better way?
- Continue to learn IT skills to understand what IT can provide
- With power comes responsibility; start slow and simple and build from there

- Your jobs are safe
- Understand that you are the tail, not the dog
- Learn the business
- Look for ways to eliminate your job

-----END-----
